Reviews

This is basically the finest publication i actually have go through till now. We have read and i also am confident that i am going to likely to read through again once more in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Prof. Adell Lubowitz)

MATHEMATICAL FOUNDATIONS OF COMPUTER SCIENCE 1986

Springer Aug 1986, 1986. Taschenbuch. Book Condition: Neu. 235x155x35 mm. This item is printed on demand - Print on Demand Titel. Neuware - Why sometimes probabilistic algorithms can be more effective.- Recent results in the theory of rational sets.- Partial interpretations of higher order algebraic types.- Kinds of context-free languages.- Algebraic theory of module specifications with constraints.- A semantical model for integration and modularization of rules.- Parallel arithmetic computations: A survey.- An approach to proof checker.- The promise of electronic prototyping.- Systolic arrays: Characterizations and complexity.- Geometric location problems and their complexity.- Developing implicit data structures.- Higher-order arrays and stacks in programming. An application of complexity theory to logics of programs.- Deterministic simulation of idealized parallel computers on more realistic ones.- Relational specifications and observational semantics.- Efficient testing of optimal time adders.- Properties of complexity measures for PRAMs and WARMs.- Iterative systems of equations.- Polynomial complexity of the Newton-Puiseux algorithm.- Unique decipherability for partially commutative alphabet (extended abstract).- The equivalence of finite valued transducers (on HDTOL languages) is decidable.- A fast parallel algorithm for six-colouring of planar graphs.- Quicksort without a stack.- Towards an efficient merging.- Homomorphic realization of automata with compositions.- Refined bounds on the complexity of sorting and selection in d - dimensional space.- On the inherent combinatorial complexity of geometric problems in d - dimensional space.- The evolution of two stacks in bounded space and random walks in a triangle.- P -genericity and strong p -genericity.- Fibonacci numeration systems and rational functions.- Safe implementation equivalence for asynchronous nondeterministic processes.- Grammars with context dependency restricted to synchronization.- Some improved parallelisms for graphs.- A complete inference system for an algebra of regular acceptance models.- Nondeterministic Turing machines with modified acceptance.- Remark on the power of compass.- Regular chain code picture languages of nonlinear descriptonal complexity.- An analysis of the nonemptiness problem...
