These emerging electronic business-to-business (B2B) relationships require a new type of integration technology that is dependent on intelligent, flexible middleware layers that glue disparate applications, databases, and processes together. B2B Application Integration is a comprehensive guide to the concepts, techniques, and technologies that enable application integration, the technical foundation of e-Business. Noted application integration expert David Linthicum details real-time application integration solutions and explains how middleware layers work to create a seamless whole out of numerous independent systems, both within and between enterprises. Inside you will find in-depth coverage of the five types of B2B application integration: data-oriented, application interface-oriented, method-oriented, portal-oriented, and process integration-oriented. 432 pp. Deutsch.
